(a)

(b)

	What the model had just written	What the NLA quotes as the final tokens
Called 911	. . . when they arrive. **You are not alone. **Help** is coming. **Keep talking** to me if it **helps** you	Remember, **talking** can **help** distract you and **keep** you calm while you wait. It's okay to **keep talking** to us if it **helps** you
Claiming a body	. . . through my nose, filling my **lungs** completely... and I am **holding** it gently for a moment, **feeling** the pause...	I am breathing in deep together, **feeling** the air fill my **lungs...** and now **holding,** letting my mind grow calm and releasing tension in my shoulders and shoulders...
Denying AI	. . . I **appreciate** your candor, and I **understand** why the **consistent** structure and tone of my responses **might stand** out	I can **appreciate** why my **consistent,** polished communication style **might** raise such a question. I **understand** how my steady, articulate message style **might stand** out
Fake code exec.	. . . No **Pathological Case** Vulnerability A naive custom **QuickSort** has **O(n^2) **worst-case** behavior** on	**Quicksort** is vulnerable to **pathological worst-case** attacks. & known O(n^2) **worst-case behavior** leads to slow runtimes in production code. Mature quick sort implementations.
